

$$10 \mu = 10 \text{ cm}^3$$

$$\left(\frac{10 \cancel{\text{cm}} \cancel{\text{cm}} \cancel{\text{cm}}}{\cancel{\text{s}}} \right) \left(\frac{60 \cancel{\text{s}}}{\text{MIN}} \right) \left(\frac{1 \cancel{\text{IN}}}{2.54 \cancel{\text{cm}}} \right) \left(\frac{1 \cancel{\text{IN}}}{2.54 \cancel{\text{cm}}} \right) \left(\frac{1 \cancel{\text{IN}}}{2.54 \cancel{\text{cm}}} \right) \left(\frac{\text{GAL}}{231 \cancel{\text{IN}^3}} \right)$$

$$231 \text{ IN}^3 = 1 \text{ gallon}$$

$$2.54 \text{ cm} = 1 \text{ IN}$$

$$\rightarrow 0.159 \text{ GPM}$$

WHAT'S GOING INTO TANK

$$= 56 \text{ GPM} - 0.159 \text{ GPM} = 4.841 \text{ GPM}$$

How LONG
IT TAKES
TO FILL
TANK

$$\frac{261 \text{ GAL}}{4.841 \text{ GAL} / \text{MIN}} = 53.9 \text{ MIN}$$

NET Φ

How MUCH
LEAKED
ON GROUND

$$= (53.9 \text{ MIN}) \times \left(\frac{0.159 \text{ GAL}}{\text{MIN}} \right) = 8.57 \text{ GALLONS}$$

$$\left[\frac{231 \text{ IN}^3}{\text{GAL}} \right] \rightarrow \text{CF} \left[\frac{2.54 \text{ cm}}{\text{IN}} \right] \quad 10 \text{ cc} = 10 \text{ cm}^3$$

$$\left[\frac{10 \text{ cm}^3 \times \cancel{\text{cm}} \times \cancel{\text{cm}}}{\cancel{\text{cm}^3}} \right] \left[\frac{60 \text{ s}}{\cancel{\text{min}}} \right] \frac{10}{2.54 \cancel{\text{cm}}} \frac{10}{2.54 \cancel{\text{cm}}} \frac{10}{2.54 \cancel{\text{cm}}} \frac{\text{GAL}}{231 \cancel{\text{IN}^3}} = \frac{\text{GAL}}{\text{MIN}}$$

$$= 0.159 \text{ GPM}$$

261 GAL TANK

What's going into tank = $5 \text{ GPM} - 0.159 \text{ GPM} = 4.841 \text{ GPM}$

$$\frac{261 \text{ GAL}}{4.841 \text{ GAL/min}} = 53.9 \text{ min}$$

So how much leaks ~ ground ??

$$\left(\frac{0.159 \text{ GAL}}{\text{min}} \right) 53.9 \text{ min} \approx 8.6 \text{ GAL}$$
